

CLAIMS

1. A replica comprising a bone part and soft tissue that are reproduced with physical properties close to those of
5 real tissue.
2. A replica according to claim 1, wherein at least a part of the replica is a breakable part that can be irreversibly broken during surgical manipulation.
3. A replica according to claim 2, wherein the breakable
10 part is replaceable.
4. A production method for the replica, comprising the steps of:
creating shape data concerning a part of a human body by CAD (Computer-Aided Design);
15 rapid prototyping of said part of the human body on a basis of said shape data; and
forming a resin coating on said rapid prototyped part of the human body, thereby reproducing the part of the human body.
- 20 5. A production method for a replica according to claim 4, wherein said part of the human body is a paranasal sinus region.
